TOXICOLOGY

VOLUME CONTENTS

Volume 63 (1990)

Review paper

Role of metabolism in dimethylnitrosamine-induced immunosuppression: a review **(The different metabolic intermediates responsible for toxicity, carcinogenicity and immunotoxicity are discussed)**
by H.G. Haggerty and M.P. Holsapple (Richmond, VA) ..... 1—23

Research paper

Evidence for oxidative damage to red blood cells in mice induced by arsine gas **(Hemolysis involves depletion of intracellular reduced glutathione)**
by P.C. Blair, M.B. Thompson, M. Bechtold, R.E. Wilson, M.P. Moorman and B.A. Fowler (Research Triangle Park, NC; Hampton, VA and Baltimore, MD) ..... 25—34

Toxicokinetics of monochloroacetic acid: A whole-body autoradiography study **(Monochloroacetic acid or its metabolites appears earlier in hydrophilic tissues than it does in lipophilic sites)**
by H.K. Bhat, A.E. Ahmed and G.A.S. Ansari (Galveston, TX) ..... 35—43

Effects of nickel on catalase activity in vitro and in vivo **(In vitro Ni inhibits catalase by directly interacting with the protein moiety whereas the in vivo inhibition does not appear to depend on such a mechanism)**
by R.E. Rodriguez, M. Misra and K.S. Kasprzak (Frederick, MD) ..... 45—52

Biological monitoring for occupational cadmium exposure: the urinary metallothionein **(Urinary metallothionein is a sensitive biological indicator of cadmium exposure and body burden, before the onset of renal dsyfunction)**
by Z.A. Shaikh, K.J. Ellis, K.S. Subramanian and A. Greenberg (Kingston, RI; Houston, TX; Ottawa, Canada and Pittsburgh, PA) ..... 53—62

Subacute toxicity of trichloroacetic acid in male and female rats **(The effects of trichloroacetic acid on intermediary metabolism are similar to the ones produced by dichloroacetic acid)**
by M.E. Davis (Morgantown, WV) ..... 63—72

Inorganic arsenic methylation by rat tissue slices **(The intracellular mechanisms of arsenic accumulation and methylation are described)**
by B. Georis, A. Cardenas, J.P. Bouchet and R. Lauwerys (Brussels, Belgium) ..... 73—84

Photochemical reactions of quindoxin, olaquindox, carbadox and cyadox with protein indicating photoallergic properties **(Photoactivated quinoxaline compounds degrade proteins)**
by H. de Vries, J. Bojarski, A.A. Donker, A. Bakri and G.M.J. Beyersbergen van Henegouwen (Leiden, The Netherlands and Krakow, Poland) ..... 85—95

Immunosuppressive activities of polychlorinated biphenyls in C57BL/6N mice: structure-activity relationships as Ah receptor agonists and partial antagonists **(Only one structural class of compounds partially antagonizes TCDD-mediated immunotoxicity)**
by D. Davis and S. Safe (College Station, TX) ..... 97—111

Acetaldehyde metabolism by isolated hepatic mitochondria from rats consuming different amounts of ethanol **(There seems to be small increases in acetaldehyde elimination after chronic application of ethanol in low doses)**
by M.E. Quintanilla and L. Tampier (Santiago, Chile) ..... 113—121

Comparative embryotoxicity of selenite and selenate: uptake in murine embryonal and fetal tissues and effects on blastocysts and embryonic cells in vitro **(A study on the distribution and effects of tetra- and hexavalent selenium in pregnant mice)**
by B.R.G. Danielsson, M. Danielson, A. Khayat and M. Wide (Uppsala, Sweden) ..... 123—136

Preclinical toxicology of the anticonvulsant calcium valproate **(Calcium valproate has a toxicity profile similar**

to other forms of valproate)
by R.M. Walker, G.S. Smith, N.J. Barsoum and G.E. Macallum (Ontario, Canada) ..... 137—155
Hemorrhagic toxicity of d-*α*-tocopherol in the rat **(Alpha-tocopherol is more toxic if ingested rather than if given by intraperitoneal injection)**
by O. Takahashi, H. Ichikawa and M. Sasaki (Tokyo, Japan)..... 157—165
Immunohistochemical localization and dynamics of paraquat in small intestine, liver and kidney **(Paraquat appears to be secreted into the gut lumen from the liver and is reabsorbed into the intestinal epithelium)**
by M. Nagao, T. Takatori, K. Inoue, M. Shimizu, K. Terazawa and H. Akabane (Sapporo, Japan)..... 167—182
The acute vascular effects of cadmium in the testis do not require the presence of Leydig cells **(Leydig cells do not mediate testicular toxicity of cadmium)**
by A.R.J. Bergh, (Umeå, Sweden)..... 183—186
Hepatotoxicity of mitoxantrone and doxorubicin **(Mitoxantrone is more hepatotoxic than doxorubicin)**
by S.F. Llesuy and S.L. Arnaiz (Buenos Aires, Argentina) ..... 187—198
Long-term effects of peroxisome proliferators on the balance between hydrogen peroxide-generating and scavenging capacities in the liver of Fischer-344 rats **(It does not appear that hydrogen peroxide plays an important role in hepatocarcinogenesis)**
by H. Tamura, T. Iida, T. Watanabe and T. Suga (Tokyo, Japan) ..... 199—213
Acute nephrotoxicity induced by isomeric dichloroanilines in Fischer 344 rats **(3,5-Dichloroaniline possesses the greatest nephrotoxic potential)**
by H.-H. Lo, P.I. Brown and G.O. Rankin (Huntington, WV) ..... 215—231
Six month oral toxicity study of trinitrotoluene in beagle dogs **(Signs of hepatotoxicity were seen at all dose levels tested)**
by B.S. Levine, J.H. Rust, J.J. Barkley, E.M. Furedi and P.M. Lish (Chicago, IL and Frederick, MD) .... 233—244
Association between rat serum cholinesterase and some phospholipid components of lipoproteins in thioacetamide-induced hepatic injury **(In hepatic injury both cholinesterase and LDL phosphatidylcholin are increased)**
by J. Osada, H. Aylagas, B. Sánchez-Ramos, M.J. Miró-Obradors, C. Arce, G. Cao, M.T. Mendez-Marco and E. Palacios-Alaiz (Boston, MD and Madrid, Spain) ..... 245—251
Announcement 253
Contents of journals relating to Toxicology ..... 255—262
Disappearance of glucose-induced oscillations of cytoplasmic Ca^{2+} in pancreatic *β*-cells exposed to streptozotocin or alloxan **(Both agents kill beta-cells by different mechanisms resulting in disappearance of Ca oscillations)**
by E. Grapengiesser, E. Gylfe and B. Hellman (Uppsala, Sweden) ..... 263—271
Induction of metallothionein synthesis by zinc in cadmium pretreated rats **(Following treatment with Cd salts, Zn can induce additional synthesis of metallothionein in liver, kidney and pancreas)**
by C.A.M. Suzuki, H. Ohta, A. Albores, J. Koropatnick and M.G. Cherian (Ontario, Canada)..... 273—284
2,3,7,8-Tetrachlorodibenzo-*p*-dioxin enhances responsiveness to post-ingestive satiety signals **(TCDD decreases intake of nutritional energy but increases consumption of saccharin solutions)**
by R. Pohjanvirta and J. Tuomisto (Kuopio, Finland)..... 285—299
Ingestion of chlorinated water has no effect upon indicators of cardiovascular disease in pigeons **(Chlorinated water has no effect on circulating lipids or arteriosclerotic plaque size)**
by A. Penn, M.-X. Lu and J.L. Parkes (New York, NY)..... 301—313
Interactions between paraquat, endogenous lung amines' antioxidants and isolated mouse Clara cells **(Interaction with endogenous amines and reductive prevention of active oxygen formation protect cultured lung cells)**
by L. Masek and R.J. Richards (Cardiff, Wales)..... 315—326
N-(3,5-Dichlorophenyl)succinimide nephrotoxicity in streptozotocin-induced diabetic rats **(Renal toxicity is decreased in the diabetic rat)**
by M.A. Valentovic, V.J. Teets, D. Nicoll, J. Stern, D. Leppla and G.O. Rankin (Huntington, WV) ..... 327—339
Liver tumor induction in B6C3F1 mice by dichloroacetate and trichloroacetate **(DCA and TCA induce hepatic tumors, probably through different mechanisms)**
by R.J. Bull, I.M. Sanchez, M.A. Nelson, J.L. Larson and A.J. Lansing (Pullman, WA) ..... 341—359
Book Review 361
Subject Index Volume 63..... 363—366
Author Index Volume 63..... 367—368
Volume Contents Volume 63..... 369—370
